

Better Discovery Starts Here

Give students and educators one place to search the trusted resources your school provides with **EBSCO Discovery Service (EDS)**

With a **single search box**, your library can:

Search More Trusted Content

EBSCO's strong publisher relationships support extensive full-text searching across magazines, newspapers, journals, books and other resources. High-quality metadata and subject indexing help students discover what simple keyword searching can miss.

Find More Relevant Results

EDS uses authoritative subject information alongside keyword matching to better understand search intent, helping students connect with useful results even when they are still learning which terms to use.

Support Every Level of Research

Libraries can customize basic and advanced search settings, filters, navigation items and subject-specific profiles to create research experiences that work for different subjects, grade levels and levels of research experience.

Help Students Explore More Intuitively

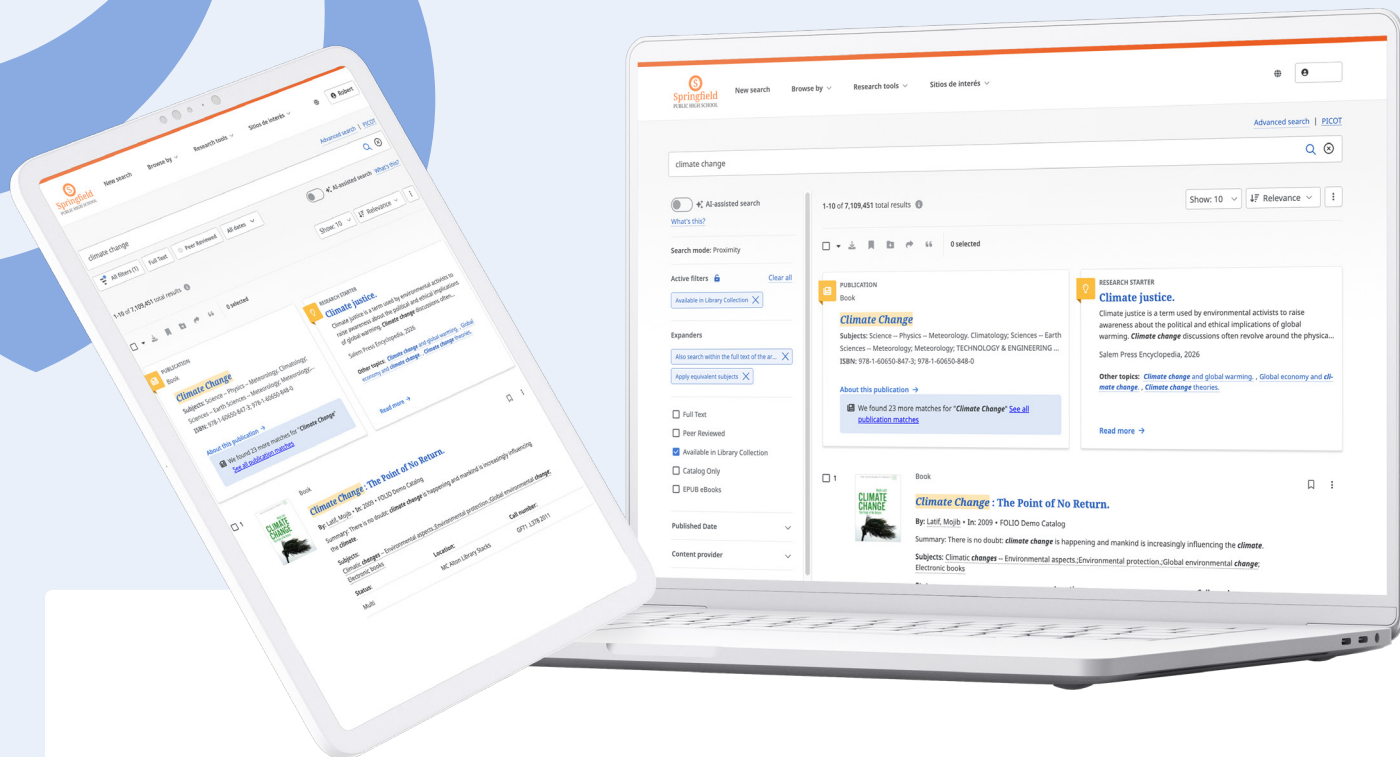

AI-assisted features help students express search intent in everyday language, identify key information and explore individual documents. Linked Data reveals connections among people, topics and sources to support continued exploration.

Keep Your Technology Choices Open

EDS works with most third-party services, including learning management systems, ILS platforms, knowledge bases and other library tools. Flexible APIs also connect EDS to the websites and services your community already uses.

Get Support Beyond Implementation

Dedicated implementation specialists, Library Service Engineers, training teams and 24/7 technical support help your school continue getting value from EDS after launch.

Evolve your library discovery strategy with:

- Access to a base index with billions of records and a knowledge base with the highest quality metadata for linking
- A comprehensive collection of full text for searching accounting for more than 1 million of the world's top publisher and provider publications
- An intuitive, responsive search interface, with basic and advanced search features and modern results lists
- Display of key resource information such as availability, location, links to full text, and custom messages
- Customizability and open integration with other library systems
- On-demand and automated access to detailed usage statistics and helpful reports
- 24/7 interface-accessible help and online support and training for administrators or end users
