

Your Guide to our Software Products

Discover how **EBSCO solutions** provide a unified research experience for libraries and their users.

EBSCO

FOLIO supports library core functions including circulation, cataloging, acquisitions, and electronic resource management. It is an entirely new open-source Library Services Platform (LSP) built through a community collaboration of libraries, vendors, and developers.

EBSCO FOLIO is a full service offering for FOLIO that includes implementation and data migration services, hosting in the EBSCO AWS infrastructure, and support for the FOLIO platform.

A Library Services Platform (LSP)

FOLIO workflows were built to address the many pain points in existing systems while providing new features and functionality.

EXAMPLES INCLUDE:

- Electronic Resources Management (ERM)
- Data import and export
- Circulation
- Inventory management
- Open APIs

EBSCO Locate, EBSCO's OPAC solution for FOLIO, serves as a path to find titles, place holds and renew items. Using Locate, patrons can search and browse their library's catalog, add titles to their bookshelf, and place a hold on a title to pick up at the library.

EBSCO's OPAC solution for FOLIO brings library services under one roof making integration and support easier than ever.

SOLUTIONS INCLUDE:

Instant Catalog Updates

Modern UX

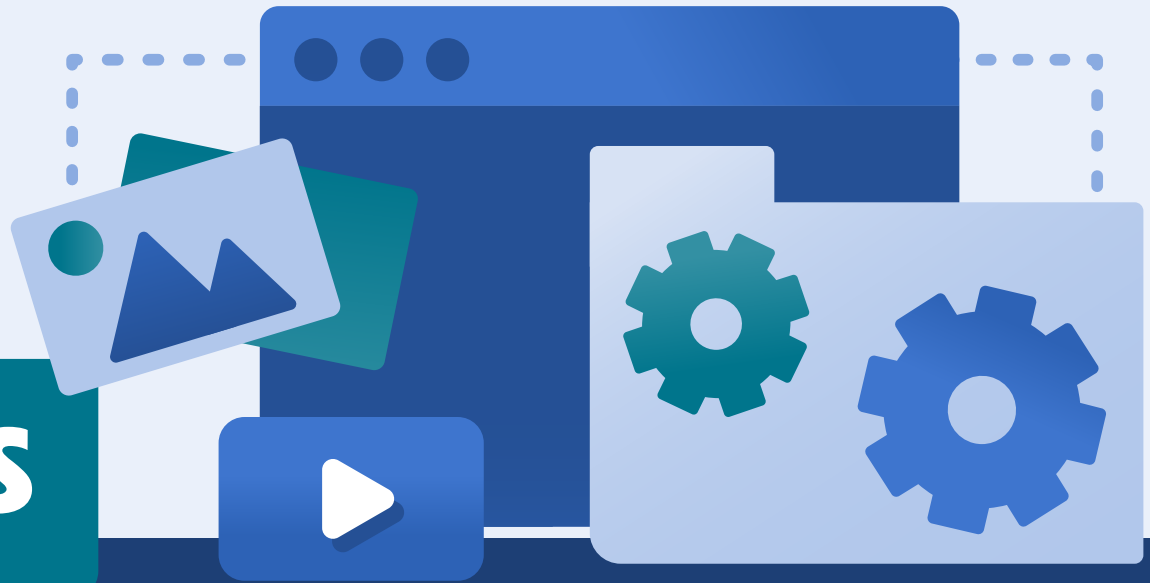

Robust Searching
and Filtering

Seamless Integrations

Browsing

OpenRS is a flexible resource sharing system that is ILS and Discovery agnostic while accommodating the full spectrum of mediated and unmediated resource sharing. OpenRS uses open standards and native integration to provide consortia with robust and extended functionality for resource sharing, including seamless unmediated borrowing functionality and expanded sharing across multiple groups.

OpenRS is an open-source resource sharing tool for libraries within borrowing networks and consortia.

HIGHLIGHTS INCLUDE:

- ✓ Modern system
- ✓ Library system neutral
- ✓ Integrates directly into ILS rather than requiring a separate user interface
- ✓ Decreases workflow and increases speed to delivery
- ✓ Engagement across library systems

eReserve Plus provides librarians and faculty with detailed analytics on student engagement and resource usage to help support evidence-based decisions and identify at-risk students. eReserve Plus uses metadata and license information, allowing the platform to accurately report on and manage copyright materials, making digital distribution easier and more legally sound. Additionally, eReserve Plus provides reading lists, resource usage, and other data to Panorama and enhanced acquisition processes using GOBI Library Solutions from EBSCO.

eReserve Plus offers a comprehensive solution for managing educational resources, providing detailed analytics, and ensuring copyright compliance.

SOLUTIONS INCLUDE:

Manage reading lists

Copyright compliance

Accessible
scholarly content

Inclusive of digital
textbooks and other types
of content within a library
LMS

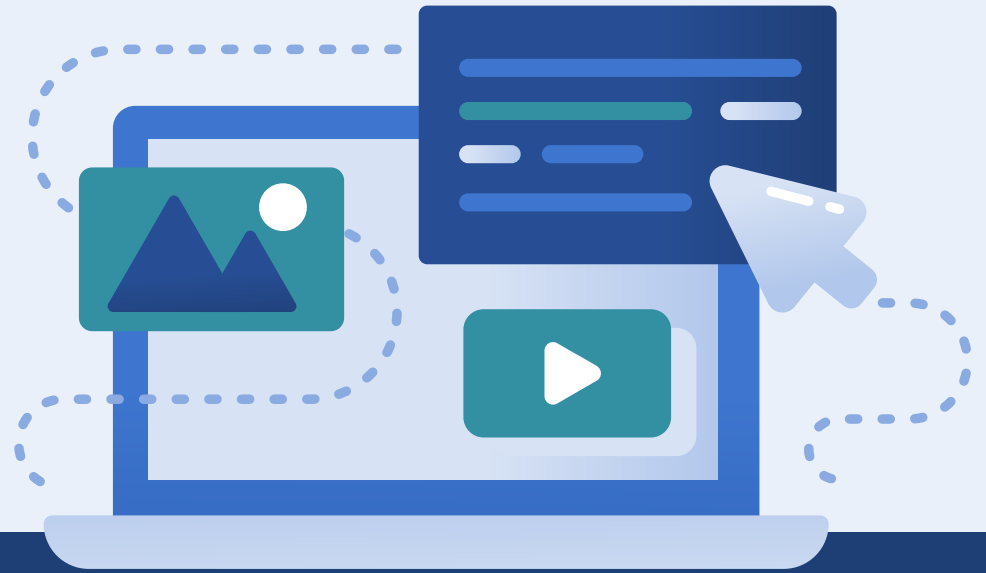

EBSCO Discovery Service (EDS) is your one-stop shop for research. Developed with user experience and accessibility at the core, the platform helps researchers find the most relevant content for their search terms and helps them easily access the full text. EDS's intent is to help the librarian and the researcher by providing an effective and efficient search experience.

Helping librarians and researchers by providing:

- **Quality Content:** EDS's meticulous subject indexing excels with its one-click search across various subject authorities and its integrated linked data network.
- **Precision Search:** The only discovery service that uses controlled vocabulary to enhance search accuracy, ensuring the retrieval of the most relevant content.
- **Easy Access to Full-Text Content:** Seamless single-sign-on and superior linking to content.
- **Enhanced User Experience:** User-centric design for a familiar, inclusive, and efficient interface.
- **Technical Expertise & Support:** Librarians provide tailored support across multiple disciplines, backed by extensive experience with EDS.

Full Text Finder

Full Text Finder (FTF) allows for greater visibility of and access to your library collection. A next generation knowledge base, holdings management tool, publication browser and link resolver, FTF integrates with EDS and FOLIO to provide users fast and reliable access to full text, while highlighting important journal content, license terms, and paths to access your critical documents.

Full Text Finder

Creates an integrated workflow tool that encompasses:

- **Search Efficiency:** Quickly manage holdings and locate publications and articles with unprecedented ease.
- **Enhanced User Experience:** Patrons enjoy a simplified search experience for publications and articles.
- **Unified Management:** Library administrators benefit from an intuitive interface allowing automatic integration of EBSCO resources.
- **Global Knowledge Base:** Maintained by a team with over a century of content experience.

BiblioGraph

BiblioGraph can enhance the portability, visibility, and value of your library's catalog.

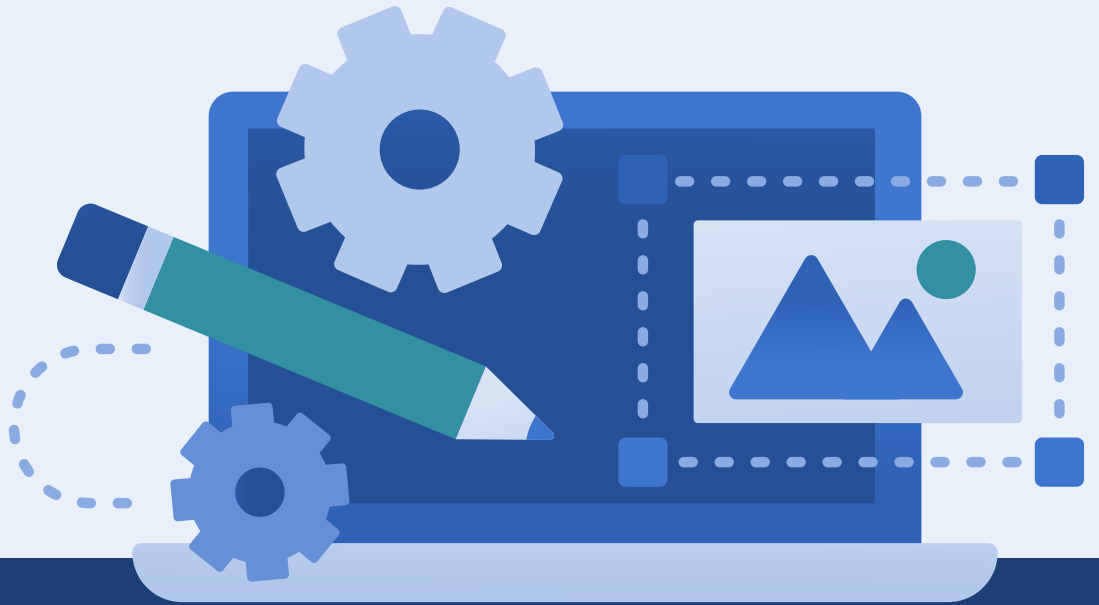

BiblioGraph allows items in your library catalog to be accessible on the open web, which allows your patrons to find, explore, and access a variety of catalog content from wherever they start their search.

BiblioGraph

BiblioGraph makes library data portable and visible by:

- **Modernizing MARC catalogs** to BIBFRAME which allows for web browsing
- **Sharing embeddable views** of your library content, like popular lists and hot topics
- **Creating segments of your content** such as popular lists, core readings, specific areas of study, and beyond
- **Building statistic dashboards** that highlight how people are accessing your catalog

Stacks

Knowledge is power, and that's why sharing information and resources is important. The Stacks content management system was built with that philosophy in mind. Information should be easy to access, regardless of the systems and content that exist behind the scenes.

Stacks

A Library Content Management System that provides:

-  A set of responsive website templates designed by experts
-  Easy creation of accessible website components
-  Enhanced website security to protect your library services
-  Continuous technical support

The logo for Panorama, featuring a stylized 'P' icon followed by the word 'Panorama' in a white sans-serif font on a teal background.

Panorama

Knowledge is power, and that's why sharing information and resources is important. The Stacks content management system was built with that philosophy in mind. Information should be easy to access, regardless of the systems and content that exist behind the scenes.

Panorama

Panorama offers a comprehensive solution with its suite of features designed to:

- **Consolidate analysis** of disparate reports
- **Create on-demand insights** from siloed sources
- **Allow for easy access** to critical data via dashboards, saving valuable time and library resources
- **Enhance library data** to support decision making and evidence-based storytelling

OpenAthens simplifies access to your library's resources by allowing users to authenticate once with a single user ID and password, providing secure, standards-compliant access from any device.

Administrators can manage user access through an intuitive dashboard, while usage statistics help optimize resource allocation. The MyAthens portal offers a user-friendly interface for librarians to showcase available resources.

A single-sign-on (SSO) security, identity, and access management tool:

- **Easy access** with one UserID and password – ideally the same credentials patrons are already familiar with
- **Connect easily** to existing identity & access management systems
- **Power permissions and personalization** to optimize UX across EBSCO resources and platforms – FOLIO, EDS, EBSCOhost, Panorama, and more!
- **Simpler access to e-book functionality** on almost every platform
- **Statistics and actionable data**

Creating Solutions for Libraries

EBSCO has solutions for all libraries. Our resources are designed to enhance library services and improve user experiences.
